***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 30 October 2003 has been entered.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 30-34 and 39 are rejected under 35 U.S.C. 102(e) as being anticipated by Herrmann et al. US Patent 6,309,546.

Art Unit: 1745

Herrmann et al. disclose a multi-level structure. (See Fig. 2) As shown by Figure 2, the woven formation of the structure provides venting channels. Each of the layers shown by reference numbers 16, 18, 20, and 22 may be made of wire mesh. (Column 5, lines 2-40.) These layers are bonded together. (Column 5, lines 7-11.) Stainless steels and titanium, which are sensitive to hydrogen embrittlement, are contemplated materials for the Herrmann et al. invention. (See column 12, lines 9-15.) With regards to claim 33, the pore or channel size of layer 16 is between 2 and 8 microns. (See column 5, lines 11-17.)

#### ***Allowable Subject Matter***

Claims 35, 36, and 37 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art fails to disclose electrochemical cells having electrodes with the structure claimed by the applicants.

#### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Sugikawa, US Patent 5,850,591; Lipka, US Patent 5,047,602 and Chisholm, US Patent 3,999,699 disclose layered metal structures.
